Ternary expansion. Take the ternary representation of a number in base 3, and replace all digits by 2 except the first digit 1. Interpret the resulting sequence as a binary number, and plot the point at that horizontal position and vertical position equal to the number of digits. The resulting fractal is the set of all numbers in the unit interval whose ternary representation does not contain the digit 1. The Hausdorff dimension of this set is $\log_3 2$, which is approximately 0.6309. The Lebesgue measure of this set is zero.

Tree. Take a point and plot its image under the three affine transformations $f_1(x)=\frac{x}{2}$, $f_2(x)=\frac{x}{2}+\frac{1}{2}$ and $f_3(x)=\frac{x}{2}+\frac{1}{4}$. Then, for each of the resulting three points, repeat the process. The resulting fractal is the set of all points that are not in the basin of attraction of infinity. The Hausdorff dimension of this set is $\log_2 3$, which is approximately 1.5849. The Lebesgue measure of this set is zero.

Cantor set. Take a point and plot its image under the two affine transformations $f_1(x)=\frac{x}{3}$ and $f_2(x)=\frac{x}{3}+\frac{2}{3}$. Then, for each of the resulting two points, repeat the process. The resulting fractal is the set of all points that are not in the basin of attraction of infinity. The Hausdorff dimension of this set is $\log_3 2$, which is approximately 0.6309. The Lebesgue measure of this set is zero.

Sierpinski triangle. Take a point and plot its image under the three affine transformations $f_1(x)=\frac{x}{2}$, $f_2(x)=\frac{x}{2}+\frac{1}{2}$ and $f_3(x)=\frac{x}{2}+\frac{1}{4}$. Then, for each of the resulting three points, repeat the process. The resulting fractal is the set of all points that are not in the basin of attraction of infinity. The Hausdorff dimension of this set is $\log_2 3$, which is approximately 1.5849. The Lebesgue measure of this set is zero.

Sierpinski carpet. Take a point and plot its image under the three affine transformations $f_1(x)=\frac{x}{3}$, $f_2(x)=\frac{x}{3}+\frac{1}{3}$ and $f_3(x)=\frac{x}{3}+\frac{2}{3}$. Then, for each of the resulting three points, repeat the process. The resulting fractal is the set of all points that are not in the basin of attraction of infinity. The Hausdorff dimension of this set is $\log_3 8$, which is approximately 1.8928. The Lebesgue measure of this set is zero.

Sierpinski tetrahedron. Take a point and plot its image under the four affine transformations $f_1(x)=\frac{x}{2}$, $f_2(x)=\frac{x}{2}+\frac{1}{2}$ and $f_3(x)=\frac{x}{2}+\frac{1}{4}$ and $f_4(x)=\frac{x}{2}+\frac{1}{8}$. Then, for each of the resulting four points, repeat the process. The resulting fractal is the set of all points that are not in the basin of attraction of infinity. The Hausdorff dimension of this set is $\log_2 4$, which is approximately 2.0000. The Lebesgue measure of this set is zero.

Menger sponge. Take a point and plot its image under the three affine transformations $f_1(x)=\frac{x}{3}$, $f_2(x)=\frac{x}{3}+\frac{1}{3}$ and $f_3(x)=\frac{x}{3}+\frac{2}{3}$. Then, for each of the resulting three points, repeat the process. The resulting fractal is the set of all points that are not in the basin of attraction of infinity. The Hausdorff dimension of this set is $\log_3 20$, which is approximately 2.7268. The Lebesgue measure of this set is zero.

Dragon curve. Take a point and plot its image under the two affine transformations $f_1(x)=\frac{x}{2}$ and $f_2(x)=\frac{x}{2}+\frac{1}{2}$. Then, for each of the resulting two points, repeat the process. The resulting fractal is the set of all points that are not in the basin of attraction of infinity. The Hausdorff dimension of this set is $\log_2 2$, which is approximately 1.0000

Ficus Elastica (rubber tree) – Ficus elastica, species

Ficus elastica (Ficus elastica) – species of plants from the genus Ficus (Ficus) of the family Mulberry (Moraceae). Synonyms: Ficus elastica var. decora (Ficus elastica var. decora), Ficus elastica var. doctoris (Ficus elastica var. doctoris), Ficus elastica var. elastica (Ficus elastica var. elastica), Ficus elastica var. emoryi (Ficus elastica var. emoryi), Ficus elastica var. glabrata (Ficus elastica var. glabrata), Ficus elastica var. glaucescens (Ficus elastica var. glaucescens), Ficus elastica var. glaucescens f. variegata (Ficus elastica var. glaucescens f. variegata
